

Abstract

ABSTRACT OF THE DISCLOSURE

Described is a A process and an arrangement for re-starting a previously interrupted spinning process in a spinning arrangement, ~~which arrangement comprises~~ arrangement is provided. The arrangement includes a drafting unit which can be shut down and also an airjet unit ~~comprising~~ including a vacuum chamber. For the purpose of removing an initially inhomogeneous fiber stream, a staple fiber strand, delivered by the re-operating drafting unit, is temporarily suctioned as waste via a deflecting device after it has left the drafting unit. Only then, when a homogeneous fiber stream has formed, is the staple fiber strand joined with a thread which is transported through the airjet unit. ~~It is hereby provided that the~~ The inhomogeneous fiber stream is removed with the aid of the low pressure in the vacuum chamber.
